

JALPA SARVALIYA

Frontend Developer

SUMMARY

- Over 1 year of experience in the IT industry, specializing in frontend web development using HTML, CSS, JavaScript, Angular.
- Proficient in building responsive, user-friendly websites and mobile designs that ensure a seamless experience across devices.
- Hands-on experience in developing projects using **WordPress**, including customizations and design implementation with **Elementor** page builder.
- Strong problem-solving skills with a solid technical foundation, combined with effective interpersonal communication for successful project delivery.

SKILLS:

HTML , CSS, Bootstrap , thingsboard, Angular, JavaScript, Frappe Framework (front) , Wordpress using Elementor

KEY PROJECTS:

1)Vehicle Tracking

- **Application Upgrade & API Integration:** Upgraded the application to Angular 15 and integrated API logic for seamless data fetching and presentation, enhancing overall functionality.
- **Core Functionality Implementation:** Implemented core features into the existing theme, optimizing user experience and improving performance.
- **Dynamic CRUD Tables & Interactive Maps:** Developed and optimized dynamic CRUD tables, interactive maps, and live tracking features, enabling real-time data visualization.
- **Geo-fencing Integration:** Successfully integrated geo-fencing capabilities within the Angular framework, enhancing functionality and increasing user engagement.

2)Real-Estate Website

- **Responsive Hiring Platform:** Designed and developed a user-friendly platform for hiring on-site developers, ensuring seamless functionality and alignment with client requirements.
- **Real Estate Website Development:** Created a comprehensive website featuring all essential pages to provide detailed property information, enhancing user engagement and accessibility.
- **Responsive Design Implementation:** Delivered fully responsive designs to ensure optimal performance and user experience across various devices and screen sizes.

3)Bueno salud care:

- **Healthcare Company Website Redesign:** Revamped the website to improve aesthetics, functionality, and user experience across desktop and mobile platforms.
- **Environmental Consultancy Website Revamp:** Redesigned the website to align with modern design standards, enhancing usability and visual appeal.
- **Responsive Design Optimization:** Delivered fully responsive layouts, ensuring

seamless performance and accessibility across all screen sizes.

4)Frappe Framework(Swa):

- Developed and customized dynamic table views and PDF generation features within the Frappe framework, utilizing JavaScript to deliver interactive and user-friendly frontend solutions

5)Auto-Irrigation Platform (Smart Farming Solution)

- A SaaS-based platform using Java Spring Boot and ThingsBoard for autonomous drip irrigation management.
- IoT Integration: Monitors soil moisture and weather conditions to automate irrigation.
- Data Visualization: Provides real-time analytics for water usage and efficiency.

6) Website

- Redesigned the existing website with a modern and responsive layout.
- Added new pages to improve content structure and navigation.
- Created and integrated custom images to enhance visual appeal.
- Applied modern CSS styling for improved user interface and performance.

7) Kelenix Project

- Developed a modern, responsive website using WordPress and pre-built themes.
- Utilized Elementor page builder to design visually appealing and mobile-friendly layouts.
- Customized the theme to align with brand identity and improve overall UI/UX.
- Integrated essential plugins to enhance website functionality and performance.
- Added a pop-up plugin to improve user engagement and make key messages more noticeable.
- Ensured cross-browser compatibility and optimized loading speed.
- Implemented best practices in layout, spacing, and visual hierarchy for a clean, professional design.
